PROFESSIONAL SUMMARY

Results-driven Computer Science graduate and certified Cloud & Kubernetes professional transitioning from 3+ years of frontend engineering into DevOps. Brings hands-on experience deploying secure, highly available AWS infrastructure using Terraform, Ansible, and Linux — including multi-tier VPC architectures, EC2 provisioning, Application Load Balancers, and automated server configuration. Grounded in a strong software development foundation with React.js, Next.js, RESTful API integration, and Git-based workflows, enabling effective collaboration across development and infrastructure teams. Holds certifications in Cloud Engineering (AltSchool Africa) and Kubernetes & Cloud Native (Linux Foundation). Eager to bring a developer's mindset to infrastructure challenges in a DevOps-focused role.

TECHNICAL SKILLS

Cloud & Infrastructure : AWS (EC2, Load Balancing, Basic Cloud Architecture) , Ansible, Linux, NGINX, SSH, Terraform, Apache, PostgreSQL, Infrastructure Monitoring & Optimization (foundational)

Systems & Networking: Linux Administration (CLI, process management, troubleshooting) , Basic Network Configuration (HTTP, DNS, client-server architecture)

Development & Debugging : HTML5, CSS3, JavaScript (ES6+), TypeScript, React.js, Next.js, Tailwind CSS, Node.js, REST API Integration & Troubleshooting, Error handling, logging, and debugging production issues

Developer Tools: Git, GitHub, Version Control, Scrum, Jira, Search Engine Optimization (SEO) Optimization

Soft Skills: Strong analytical and problem-solving skills , Clear communication across technical and non-technical teams, Ownership of issues from detection to resolution , Time management and prioritization in fast-paced environments.

PROJECTS

Secure Web Application Deployment on AWS : <https://medium.com/@aaronakinwande/building-a-secure-highly-available-aws-web-infrastructure-with-bastion-ansible-and-load-58bb3812c729>

- Designed and deployed a secure multi-tier cloud architecture using a bastion host, private EC2 instances, and an Application Load Balancer to ensure controlled access and high availability.
- Configured a custom Virtual Private Cloud with public and private subnets, implementing routing via an Internet Gateway to isolate backend servers from direct internet exposure.
- Implemented secure SSH access using a bastion host and ProxyJump, preventing direct connections to private servers and enforcing a controlled access pattern.
- Automated server provisioning using Ansible by developing reusable playbooks to install NGINX, start services, enable boot persistence, and deploy dynamic HTML content.
- Configured an Application Load Balancer to distribute HTTP traffic across multiple backend servers, improving fault tolerance and ensuring continuous availability.
- Enforced least privilege security group rules, restricting access so that web servers only accept traffic from the load balancer and bastion host.
- Validated system security by confirming that application access was only possible via the load balancer DNS and not through EC2 public IP addresses.
- Troubleshoot and resolved issues related to SSH authentication, network routing, and Ansible dependency conflicts by leveraging Linux system tools and Python virtual environments.

Terraform Cloud Infrastructure Deployment: <https://medium.com/@aaronakinwande/building-a-secure-highly-available-aws-infrastructure-with-terraform-from-scratch-07afafa250b4>

- Designed and provisioned a custom VPC architecture with public and private subnets across multiple availability zones, ensuring high availability and fault tolerance.
- Implemented secure network segmentation, restricting direct internet access to private resources using NAT Gateways and controlled routing.

- Deployed and configured EC2 instances (Bastion, Web, and Database servers) using Infrastructure as Code principles.
- Automated server setup using user data scripts, installing and configuring Apache web server and PostgreSQL database without manual intervention.
- Engineered a secure bastion host access model, enabling controlled SSH access to private servers while restricting exposure.
- Configured Application Load Balancer (ALB) with target groups and health checks to distribute traffic and ensure service reliability.
- Parameterized infrastructure using Terraform variables and outputs, improving reusability and environment flexibility.
- Troubleshoot and resolved real-world infrastructure issues including SSH authentication failures, networking misconfigurations, and deployment errors.
- Documented architecture, deployment steps, and validation evidence, demonstrating end-to-end infrastructure delivery.

EXPERIENCE

NGBookings.com Limited

Lagos, Nigeria

Frontend Web Developer

June 2025 - Present

- Assist with development, maintenance, and continuous improvement of the company's booking web platform.
- Support website content updates, layout adjustments, and feature enhancements based on business requirements.
- Troubleshoot and resolve website bugs, API failures, and frontend-backend integration issues to maintain system stability.
- Test web applications across browsers and devices to ensure responsiveness, functionality, and a consistent user experience.
- Monitor website performance and assist with SEO optimization and page speed improvements.
- Collaborate with backend and DevOps teams during deployments, system upgrades, and incident resolution.
- Document technical issues, updates, and resolutions to maintain accurate support logs.

Zenon

Lagos, Nigeria

Frontend Web Developer (Contract)

June 2025 - October 2025

- Developed and enhanced features for a live e-commerce platform connecting dealers, customers, and delivery riders.
- Maintained the Customers Module using React.js, integrating RESTful APIs for real-time data exchange.
- Diagnosed and resolved production bugs, ensuring smooth order processing and stable application performance.
- Used Git and Jira to manage issue tracking, debugging workflows, and deployment coordination.
- Improved system stability by refactoring components and ensuring consistent state management.

PureJim Ltd

Lagos, Nigeria

Junior Frontend Developer

September 2023 - January 2025

- Developed and maintained responsive web applications using React.js, Next.js, and Tailwind CSS.
- Supported live applications by debugging issues, fixing bugs, and ensuring uptime of critical features.
- Integrated RESTful APIs and handled error states, request failures, and data inconsistencies.
- Participated in code reviews and collaborated with teams to improve system maintainability and resilience.

Darey.IO

Lagos, Nigeria

Frontend Developer Intern

August 2023 - December 2023

- Assisted in troubleshooting and fixing production bugs and UI issues.
- Worked closely with senior engineers to understand system architecture and debugging strategies.
- Built and maintained features while ensuring integration stability with backend services.

EDUCATION AND CERTIFICATIONS

Bachelor Of Science in Computer Science

Ojo, Lagos State

Lagos State University • 4.57

2024

• Graduated with FIRST CLASS HONOURS

Kubernetes and Cloud Native Associates

Linux Foundation

2025

National Youth Service Corp Completion Certificate

Ijebu-ode, Ogun State

2025

Cloud Engineering Certification

AltSchool Africa

2025
